

# Are you Prepared?

## Disseminating Information = Knowledge Management

- Organizations, more than ever before, have the need to disseminate information to everyone that "touches" the organization. Internally and externally, conveying information, providing access to data and sourcing information is a priority.
- The next hurdle is getting that information in the hands of the "right" person to manage that information.
- Information serves no purpose unless it is in the hands of the right person. At that point knowledge management can occur and action can take place.

## Current Information = Knowledge Management

- Once you have a process in place to get the information in the hands of the right person, the next step is to insure that the information is current.
- User Specific information must be accessible in a timely manner, from any computer regardless of location. It is only when information is current and accessible that meaningful decisions and actions can take place.

## Centralized Collaboration = Knowledge Management

- Enabling collaboration and streamlining inter-organizational, inter-departmental processes is an ongoing initiative within organizations worldwide. Allowing multiple departments and multiple locations to collaborate in a collective way results in a process where every individual is informed and "connected".
- The end result, Knowledge Management at it's highest level.

**Good news... you have everything you need.  
The question is... how do you deliver it?**

**How do you take a measured approach without large scale conversion and still utilize existing technology investments?**

**How do you get the right information to the right individual?**

**How do you cost effectively take advantage of existing systems and data, provide easy access to any user group in the world, and do it quickly and easily?**

**Welcome to the Lumenation Hyper-Portal!**

# Lumination Hyper-Portal

In today's world, we are drowning in information and starving for knowledge. Why? Because getting the right information to the right person at the right time is everything. Only then, can that information become knowledge. Welcome to the Lumination Hyper-Portal. The one system that defines individual knowledge management.

## Lumination Server

The Hyper-Portal is platform independent, protecting organizational Operating System investments. It can literally run within all major operating systems.(Linux,Windows, Mac, Unix, etc.).

## Internet or Intranet (local) Access

Browser Access, No downloads or maintenance required on the desktop.

## Secure Access

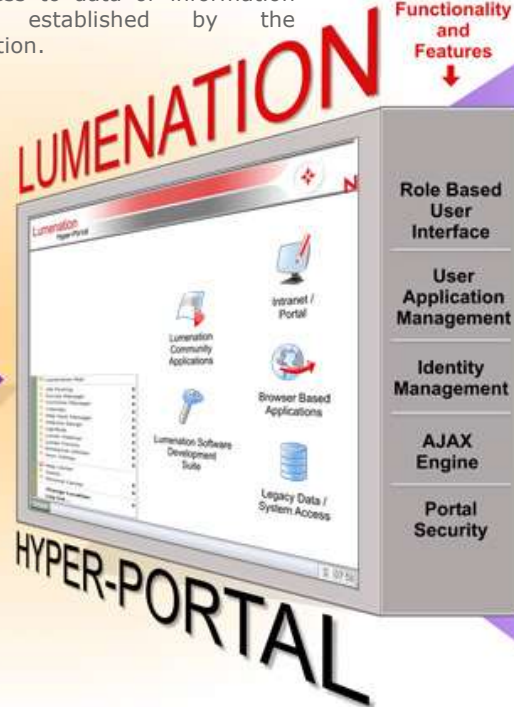

Security includes industry standards encryption and SSL, plus 5 layers of security residing within the Portal itself. In addition, the system resides on Novell SUSE Linux Enterprise Server 9 (SLES 9), the most secure server software in the world (EAL 4+).

## User Application Management

The Hyper-Portal empowers IT to manage access of ALL users to appropriate browser / web based applications through one system.

## Role Based User Interface

Each user is seen as unique, with their own interface, functionality and access to data or information as is established by the organization.

## Functionality and Features

## Examples of what you can Access

- Intranet / Portal
- Browser Based Applications
- Legacy Data / System Access
- Lumination Community Applications
- Lumination Software Development Suite

## Accessing Data

You now have the ability, via one middleware framework, to access all your data, applications, and participate in information exchange based on the user. Regardless of location, language, size or the system you currently have in place, the Hyper-Portal is ready for immediate deployment to give you access to what you need, when you need it.

## Identity Management

Lumination provides an extensive user management system internally allowing for complete identity management capabilities and/or integrate directly with any LDAP enabled directory service.
